LIST OF CONTENTS

NUMBER 1

A. Mukhopadhyay, P. Venugopal and **S. P. Vanka**	1	Oblique vortex shedding from a circular cylinder in linear shear flow
C.-F. A. Chen, R. D. Lotz and **B. E. Thompson**	25	Assessment of numerical uncertainty around shocks and corners on blunt trailing-edge supercritical airfoils
F. Boyer	41	A theoretical and numerical model for the study of incompressible mixture flows
C. Bartels, M. Breuer, K. Wechsler and **F. Durst**	69	Computational fluid dynamics applications on parallel-vector computers: computations of stirred vessel flows
R. Kahawita and **P. Wang**	99	Numerical simulation of the wake flow behind trapezoidal bluff bodies
L. Xue	113	Study on laminar flow in helical circular pipes with Galerkin method
S. M. Deshpande	131	Erratum to "Asian Computational Fluid Dynamics Conference" [Computers and Fluids 30(5)]

NUMBER 2

R. M. Sadri and **J. M. Floryan**	133	Entry flow in a channel
J. Cortes	159	On the construction of upwind schemes for non-equilibrium transient two-phase flows
C. H. Liu	183	Vortex simulation of unsteady shear flow induced by a vortex ring
C. Shu and **K. H. A. Wee**	209	Numerical simulation of natural convection in a square cavity by SIMPLE-generalized differential quadrature method
A. H. Ibrahim, G. J.-W. Hou, S. N. Tiwari and **R. E. Smith**	227	Aerodynamic design optimization using Euler equations and variational methods
E. Garnier, P. Sagaut and **M. Deville**	245	Large Eddy simulation of shock/homogeneous turbulence interaction
	I	14th U.S. National congress of theoretical and Applied Mechanics

NUMBER 3

T. W. Roberts, D. Sidilkover and **S. V. Tsynkov**	269	On the combined performance of nonlocal artificial boundary conditions with the new generation of advanced multigrid flow solvers

H. M. Park and **W. S. Jung**	309	Numerical solution of optimal magnetic suppression of natural convection in magneto-hydrodynamic flows by empirical reduction of modes
K. K. Fjelde and **K. H. Karlsen**	335	High-resolution hybrid primitive–conservative upwind schemes for the drift flux model
K. Willcox, J. Peraire and **J. White**	369	An Arnoldi approach for generation of reduced-order models for turbomachinery

NUMBERS 4–7

P. Bontoux, J.-J. Chattot, M. Hafez and **P. Haldenwang**	391	Preface
P. Bontoux, J.-J. Chattot, M. Hafez and **P. Haldenwang**	393	Foreword
O. Botella	397	On a collocation B-spline method for the solution of the Navier–Stokes equations
C. Canuto	421	*Multilevel stabilization devices in CFD*
M. M. Cerimele, D. Mansutti and **F. Pistella**	437	*Numerical modeling of liquid/solid phase transitions* *Analysis of a gallium melting test*
W. Cheng and ***R. Temam***	453	*Numerical approximation of one-dimensional stationary* diffusion equations with boundary layers
G. Chiavassa, M. Guichaoua and **J. Liandrat**	467	Two adaptive wavelet algorithms for non-linear *parabolic partial differential equations*
O. Daube and **P. Le Quéré**	481	Numerical investigation of the first bifurcation for the flow in a rotor–stator cavity of radial aspect ratio 10
E. De Angelis, C. M. Casciola and **R. Piva**	495	DNS of wall turbulence: dilute polymers and self-sustaining mechanisms
C. de Jouëtte, O. Laget, J.-M. Le Gouez and **H. Viviand**	509	A dual time stepping method for fluid–structure interaction problems
M. El Ganaoui, A. Lamazouade, P. Bontoux and **D. Morvan**	539	Computational solution for fluid flow under solid/liquid phase change conditions
J. H. Ferziger, J. R. Koseff and **S. G. Monismith**	557	Numerical simulation of geophysical turbulence
E. Fournier, S. Gauthier and **F. Renaud**	569	2D pseudo-spectral parallel Navier–Stokes simulations of compressible Rayleigh–Taylor instability
P. Haldenwang and **D. Pignol**	589	Dynamically adapted mesh refinement for combustion front tracking

S. G. Huberson and S. G. Voutsinas — 607 — Particles and grid

C. Kiris and D. Kwak — 627 — Aspects of unsteady incompressible flow simulations

A. Lerat and C. Corre — 639 — Residual-based compact schemes for multidimensional hyperbolic systems of conservation laws

D. V. Lyubimov, T. P. Lyubimova, R. V. Skuridin, G. Chen and B. Roux — 663 — Numerical investigation of meniscus deformation and flow in an isothermal liquid bridge subject to high-frequency vibrations under zero gravity conditions

M. Marquillie and U. Ehrenstein — 683 — Numerical simulation of separating boundary-layer flow

M. Meinke, W. Schröder, E. Krause and Th. Rister — 695 — A comparison of second- and sixth-order methods for large-eddy simulations

G. Moretti — 719 — Thirty-six years of shock fitting

M. Pandolfi and D. D'Ambrosio — 725 — Performances of upwind methods in predicting shear-like flows

I. Raspo, S. Hugues, E. Serre, A. Randriamampianina and P. Bontoux — 745 — A spectral projection method for the simulation of complex three-dimensional rotating flows

J. Roy, M. Hafez and J. J. Chattot — 769 — Explicit methods for the solution of the generalized Cauchy–Riemann equations and simulation of inviscid rotational flows

S. G. Rubin, M. L. Celestina and K. Srinivasan — 789 — Adaptive and fixed segmented domain decomposition multigrid procedures for internal viscous flows

C. Sabbah, M. Y. Forestier and R. Pasquetti — 817 — Filtering of the pressure spurious modes in $\mathbb{P}_N$–$\mathbb{P}_N$ spectral approximations of the Stokes system

B. D. Shizgal — 827 — Spectral methods based on nonclassical basis functions: the advection–diffusion equation

NUMBER 8

845 — Publisher's note

K. V. Pagalthivarthi and V. Ramanathan — 847 — Analytical and numerical prediction of inviscid free surface flow in rotating channel

A. Burbeau and P. Sagaut — 867 — Simulation of a viscous compressible flow past a circular cylinder with high-order discontinuous Galerkin methods

K. Manik, X. Wen and **D. B. Ingham** 891 The flow induced in a three layer stratified fluid by a submerged sink or source with stagnation points on the free surfaces

T. W. H. Sheu and **S. F. Tsai** 911 Flow topology in a steady three-dimensional lid-driven cavity

G. Mompean 935 On predicting abrupt contraction flows with differential and algebraic viscoelastic models

A. Povitsky 957 Improving jet reactor configuration for production of carbon nanotubes

J. C. Tsao and **A. P. Rothmayer** 977 Application of triple-deck theory to the prediction of glaze ice roughness formation on an airfoil leading edge

C. Held and **A. Dervieux** 1015 One-shot airfoil optimisation without adjoint

1051 4th International Conference on inverse problems in engineering: theory and practice
